

SPLINDED-PS

Bioremediation is an eco-friendly process that practises on living organisms to remove or neutralize harmful substances thereby clean up the water & soil of the pond. SPLINDED-PS works as highly efficient photosynthetic bacterial formulation that release enzymes like Laccases, Hydrolases, Dehalogenases, Proteases, and Lipases, for which breaks up the organic load in the pond.

BENEFITS SPLINDED-PS: controls all kinds of pathogens & toxic unwanted gases. Provides favourable environment for fish growth. Reduces COD and BOD levels Oxidizes H₂S to elemental sulphur. Digests the unused organic substances including proteins, carbohydrates and lipids

COMPOSITION: Bacillus spp, Rhodobacter spp, Rhodococcus spp, Nitrosomonas & Nitrobacter spp.

DOSAGE: 2.5 Lt/ hectare once in a month (or) as advised by Aquaculture consultant PACKING 5 Lt Jar.
