

CINOLITE +

Improves Water Quality

Cinolite + consists of Clinoptilolite, which has ion-exchange properties and ability to improve water quality. Regulates pH levels in pond water by adsorbing and releasing ions. Its Tetrahedral structures containing aluminium, silicon, and oxygen and help in maintaining alkalinity of pond water.

BENIFITS

Removes pollutants, such as ammonia, nitrite, and heavy metals from water, Helps in maintaining a healthy environment for fish and other aquatic species. Acts as nutrient reservoirs by absorbing excess nutrients in the water. Maintains a balanced and stable environment for aquatic organisms. Prevents nutrient imbalances that lead to algal blooms. Inhibits the growth of harmful bacteria, viruses, and other microorganisms and significantly reduce the risk of infections.

COMPOSITION

Silicon Dioxide [SiO₂] = 5-7% Aluminium Oxide [Al₂O₃] = 15-27% Calcium Oxide [CaO] = 3-8% Magnesium Oxide [MgO] = 0.5-3% Sodium Oxide [NaO] = 1-3% Carrier = Hydrated Sodium

DOSAGE

20 kg per acre or 50 kg per Hectare

PACKING

10 KG, 20 KG, 50 KG BAGS

STS BIOTECH PVT. LTD.
