8. Tinospora cordifolia - Immunomodulator - 5g
9. Terminalia Chebula - 3g
10. Zingiber officinale - 7g

Liver tonics play a crucial role in aquaculture by enhancing the overall health and growth of fish. These supplements are designed to improve liver function, which is vital for efficient digestion, nutrient absorption, and detoxification processes. By promoting better liver health, liver tonics help in preventing diseases, improving feed conversion rates, and ensuring optimal growth and productivity in fish farming. Regular use of liver tonics can lead to healthier fish, reduced mortality rates, and increased profitability for aquaculture operations

## BENIFITS

Stimulates Hepatic Enzymes For Proper Digestion.

Improves Hepatic Pancreas Function.

Controls Gut And White Muscle Diseases.

Protects Feed Intake And Ensures Better Growth.

Increases Feed Toxins Including Aflatoxin

### Dosage:

3-5 kg of feed continuously (or as advised by an Aquaculture Consultant).

### Packing:

Available in packets of 1 kg & 10 kg bags.
