

ALUMOSS

SOIL CONDITIONER OF THE POND

A SYNERGISTIC COMBINATION OF ALUM & GENUS SPHAGNUM.

DESCRIPTION

ALUMOSS works as a coagulant that can clear turbidity from pond water, which binds the negatively charged particles in the water like clay sediment besides reducing phytoplankton blooms.

ALUMOSS precipitates and inactivates phosphorus, which is a nutrient that algae and rooted plants need to grow.

ALUMOSS releases tannic acid, which gently lowers alkalinity and increases the soil's potency to hold water and nutrients by increasing capillary forces and cation exchange capacity.

BENEFITS

Controls the density of *Prymnesium Parvum*, a type of algae that can be harmful to fish.

Recovers water quality almost immediately after application, and the water will continue to improve over time.

Potentiates the soil's fertility to hold water and nutrients.

COMPOSITION

Combination of Alum 65% and Genus Sphagnum 35% as per QS.

DOSAGE

Sprinkle 1 kg of ALUMOSS per Acre or 2.5 kg per Hectare throughout the surface of the pond water.

PACKING 25 KG BAGS

STS BIOTECH PVT. LTD.
